Fact Sheet

Business

Neuromonics, Inc., manufactures and distributes clinically proven, FDA-cleared medical devices to treat mild, moderate and severe tinnitus. With research and development beginning in the early 1990s, Neuromonics has helped thousands of tinnitus sufferers improve their quality of life and overcome the daily life challenges associated with tinnitus.

Products

- *Oasis:* Works with the clinically administered and monitored Neuromonics Tinnitus Treatment over a period of six-eight months. Individually programmed music targets auditory pathways. For tinnitus sufferers who need a long-term management program.
- *Haven*: Prescribed, personally tuned device to provide on-demand tinnitus relief.
- *Sanctuary*: Device with pre-set hearing profiles and functions with simple setup and fitting. Offers immediate, situational relief.

Features

- Non-invasive, compact, lightweight devices.
- Function like familiar consumer music players.
- Easy to use in daily activity.
- Reduction in tinnitus disturbance for more than 90 percent of patients in clinical trial setting with the Oasis device.

Neuromonics Tinnitus Treatment (NTT)

The NTT works with the Neuromonics Oasis, a non-invasive, compact, lightweight device that uses music – programmed for each patient's individual audiological profile – to deliver a neural stimulus that targets the brain's auditory pathways. The NTT targets the neurological processes of tinnitus: its audiological, attention-based and emotional aspects.

Providers

More than 400 licensed audiologists across four continents administer the Neuromonics Tinnitus Treatment. All are trained by Neuromonics.

- Argentina	- Brazil	- Malaysia	- Singapore
- Australia	- Columbia	- New Zealand	- United States

Year founded

2001
